

CLUBCAR DS Bracket Installation Instructions

Installation Method 1

Without installation bracket:

- (1) Before installing the battery onto the golf cart, you need to trim approximately 1/4 inch from each side of the battery bracket to ensure a snug fit between the frame longitudinals.

- (2) Place the battery in the battery compartment and secure the battery bracket to the frame on both sides with bolts. After installation, connect the positive and negative terminals correctly.

Installation Method 2

With installation bracket (H03-000247):

- (1) Before installing the battery onto the golf cart, you need to trim approximately 1/4 inch from each side of the battery bracket to ensure a snug fit between the frame longitudinals.

- (2) Place the battery in the battery compartment and secure it from the top of the battery and the bottom of the frame using the included bracket kit. You can place shims at the bottom for better battery security, depending on the situation. After installation, connect the positive and negative terminals correctly. Refer to the image below for the fixing method.
